What is Reality Therapy?

A counselling approach developed by psychiatrist Dr William Glasser since 1965 that is highly focused, interactive and widely applicable. Reality Therapy focuses on the present and helps people to understand that they can choose a better present and future. This is based on Choice Theory that states, regardless of what has been occurred in the past, to be happy and effective we must live and plan in the present.

Oftentimes people's wants lead them to engage in behaviours that don't get them what they need. Using Reality Therapy, we assist them to create more achievable wants or choose behaviours that will better satisfy what they want.

This workshop is for: Counsellors/teachers/parents/managers interested in helping and relating with others more effectively.

Training

1. Discussion of Choice Theory and Reality Therapy(CTRT), the counselling environment, procedures, applications in school, the workplace and at home
2. Concepts will be taught through role-plays, lectures, videos, and facilitation of activities.
3. Special emphasis is given to the practice of Reality Therapy by participants. They will be supervised in small groups and receive individual feedback.
4. Implementing CTRT through practical skills in relation with students, children and colleagues.
5. At the end of this workshop, participants will be awarded a Certificate of Basic Intensive Training from the William Glasser Institute (International).
